Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by McCarthy et al (US 6,139,716).

McCarthy discloses an etching method comprising:

- a first step of subjecting a plastic substrate 16 to ion implantation treatment, to reform a surface of said plastic substrate, thereby forming a surface reformed layer (col.3, lines 47-67); and
- a second step of subjecting said plastic substrate to a wet etching treatment (col.4, lines 1-3) using a specific etchant (potassium hydroxide solution) by determining an end point of the wet etching treatment with the use of said surface reformed layer.

McCarthy determines an end point and stops the etching (McCarthy does not explicitly disclose how end point is determined, but it is determined since the etching is stopped at some point in time), and as broadly claimed, the surface reformed layer is used during the determination step since it is etched.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCarthy et al (US 6,139,716).

The discussion of McCarthy from above is repeated here. Examiner takes official notice that it is conventional to use an ultrasonic environment to improve etching. It would have been obvious to one with ordinary skill in the art to use an ultrasonic environment in the method of McCarthy in order to improve etching.

Allowable Subject Matter

Claims 7-27 are allowed.

Claims 2-4, 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Examiner's Remarks

Examiner notes that in the specification and claims, "sacrifice" should cite - - sacrificial -
- to be more clear.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art shows methods of ion implantation of plastic substrates and etching.
